## Name:

## Nice Gneiss

**Look** at the large piece of **Gneiss** (pronounced nice) from Greenland.

**Feel** it and ring the words that describe it:

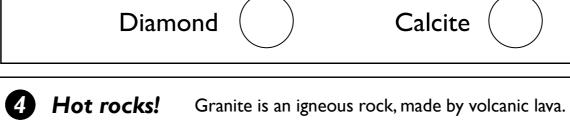

colourful stripy rough
smooth brittle
hard rigid green
soft new

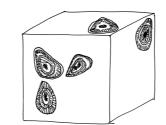

# What do we call rocks that come from space? Many of these contain a metal called: NOIR Rearrange the letters: Feel the large rock from space. What does it feel like?

**Flick** the edge of it with your finger!

What **sound** does it make?

## Rock hard Look in the light green Finding Out About Minerals display case and find the Hardness Scale. Put these minerals in order with hardest as 10 and softest as 1 The first one has been done for you. Fluorite

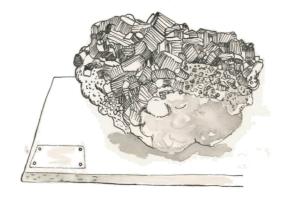

**Look** at the incredible pattern on the

**Orbicular Granite.** 

**Draw** a section of it here.

## Keep looking!

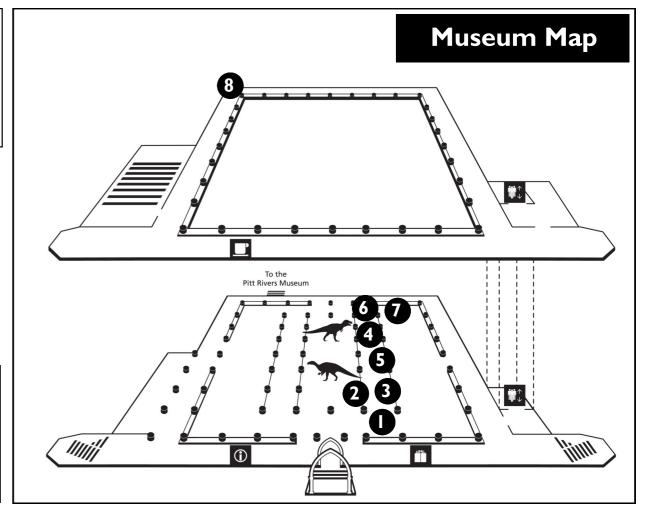

As you **look** around the displays, can you spot a rock that used to be a plant and is now a fossil?

### Keep touching!

Touch the piece of **pyrite**.

It is often called **Fool's Gold**. Why do you think this is?
