

Hermit crab hand puppet

Instructions

1. Colour in spiral part of the hermit crab's shell, as well as the claws and eye stalks.
2. Cut around the edge of the shell and claws.
Cut along the marked line.
3. Swirl the edge of the shell around and glue in place. This should make a cone shape.
4. Make holes over the black circles on the shell.
5. Push the elastic band through both of the holes so that you create two small loops underneath the shell for your fingers.
6. Cut out the eye stalks and eyes. Glue the eyes to the end of each stalk.
7. Glue the eye stalks under the front of the shell so your hermit crab is peeping out.
8. Pop your hand in and scuttle away!

Hermit crabs are right-handed. Their right claw is bigger than their left!

Hermit crab shell and claws

Hermit crabs have 10 legs, but only 6 stick out at the front. The others help to hold the shell on!
