Moth Finger Puppets

Large yellow underwing moth

Finger loop

Proboscis

Garden tiger moth
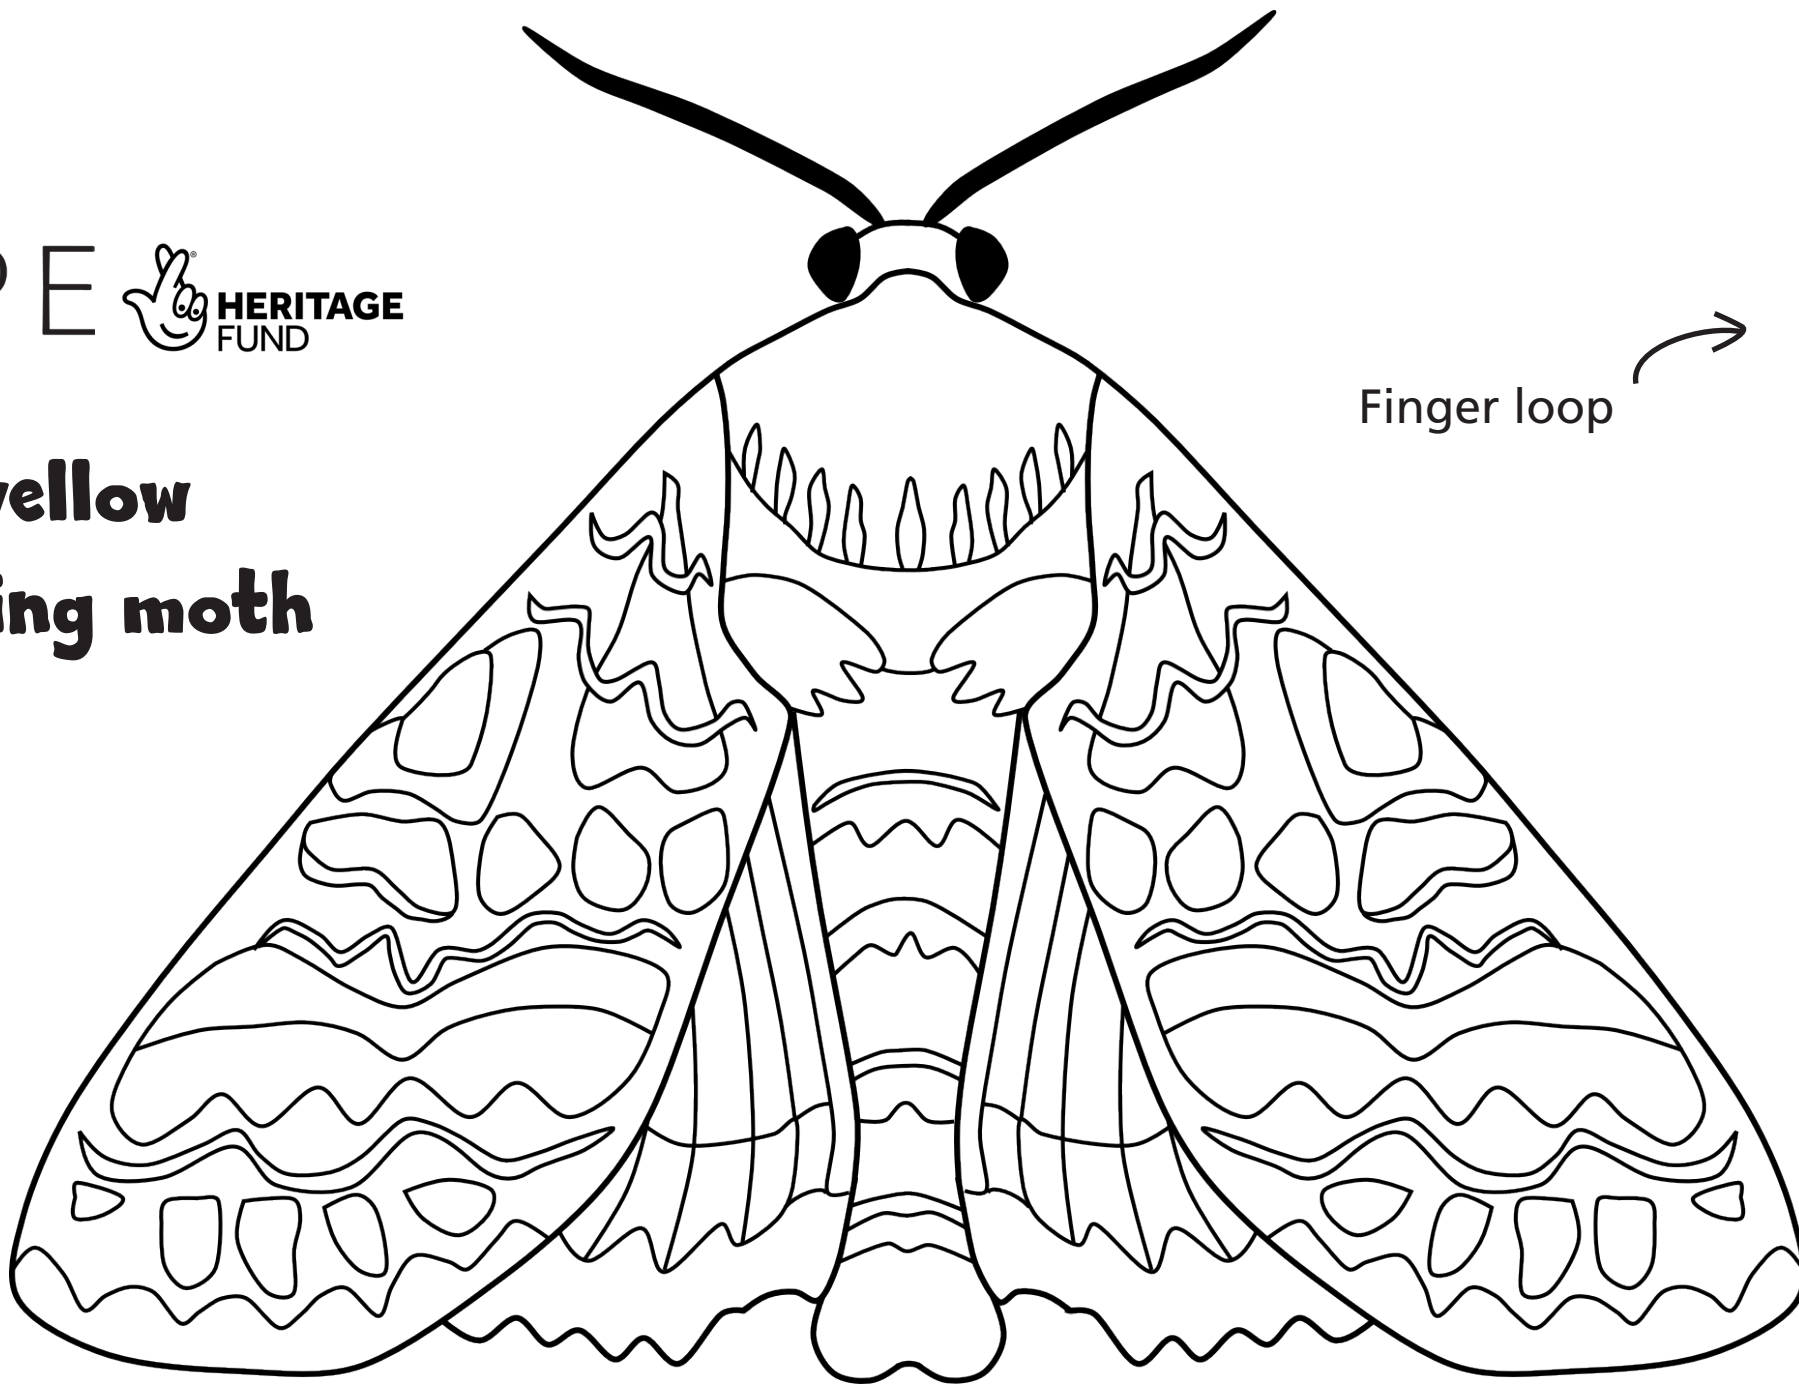

Finger loop
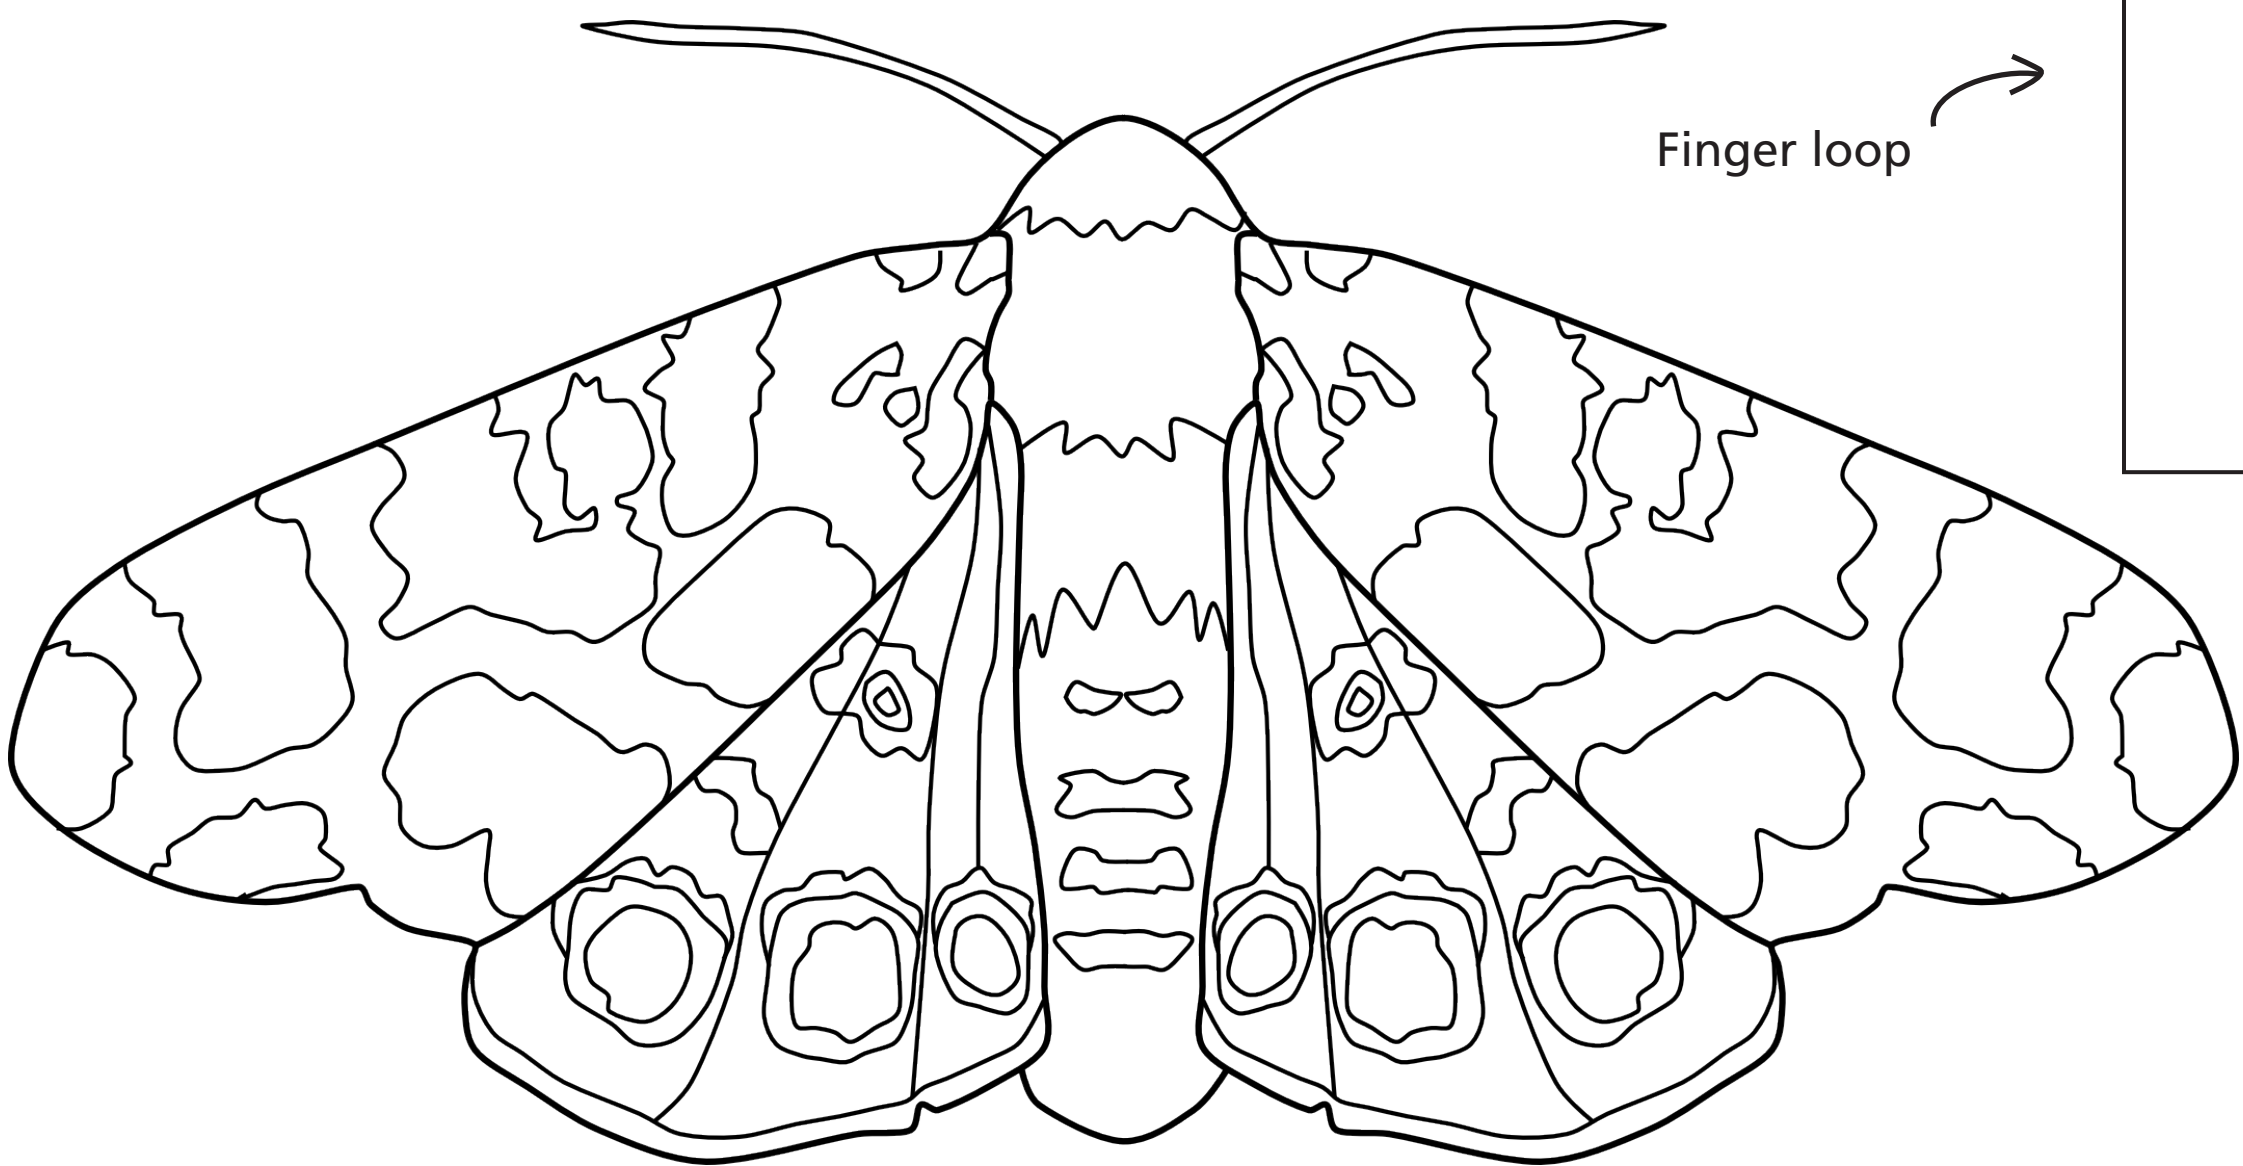

Proboscis

Instructions

1. Colour in the two moths. As moths have symmetry on their wings, use the same colours on each wing so that they reflect each other.

2. Cut out the moths as well as each moth's finger loop and proboscis (tongue).

3. Glue one finger loop horizontally to the back of your first moth, then do the same for your second moth - only glue down the ends of the loop so you can slip your finger through.

4. Take a proboscis and curl the end of it with a pencil before gluing it under the head of your first moth. Do the same for your second moth.
